

RAMOR 500

General Product Description

The ballistic protection steel with high hardness

Ramor™ 500 is a ballistic protection steel of high hardness, available in thicknesses of 2-30 mm (0.079-1.18") and hardnesses of 490-560 HBW.

Ramor 500 is available as cut-to-length sheet in thicknesses of 2-6.5 mm (0.079-0.256") and as plate in thicknesses of 6-30 mm (0.236-1.18"). Delivered in quenched condition, Ramor 500 is not intended for further heat treatment.

Dimension Range

Ramor 500 is available as cut-to-length sheet in thickness between 2.0- 6.50 mm, and as plate in thickness 6.0- 30.0 mm.

Mechanical Properties

Thickness (mm)	Hardness (HBW)
2.0- 30	490- 560

Mechanical Testing

Brinell hardness test according to EN ISO 6506-1 on each heat treatment individual/coil.

Hardness is measured on a milled surface 0.3-2 mm below plate surface.

Chemical Composition (ladle analysis)

C (max %)	Si (max %)	Mn (max %)	P (max %)	S (max %)	Cr (max %)	Ni (max %)	Mo (max %)	B (max %)
0.35	0.70	1.50	0.015	0.010	1	2	0.70	0.005

The steel is grain-refined. Phosphorous and sulphur are not intentionally alloying elements.

Fabrication and Other Recommendations

Welding, bending and machining

For information concerning welding and fabrication, see SSAB's brochures on www.ssab.com or consult Tech Support, techsupport@ssab.com.

Ramor 500 is not intended for further heat treatment. If Ramor 500 is heated above 180 °C after delivery from SSAB no guarantees for the properties are given.

Appropriate health and safety precautions must be taken when cutting, welding, grinding or otherwise working on the product. Grinding, especially of primer coated plates, may produce dust with high particle concentration.
