STRENX TUBE 700MH

General Product Description

Advanced high-strength structural hollow sections

Strenx Tube 700MH is an HF-welded cold-formed structural hollow section made of hot-rolled high-strength steel with a minimum yield strength of 700 MPa.

Its high strength combined with naturally stiff form of welded hollow section enables construction of stronger and lighter structures. Strenx Tube 700MH meets or exceeds the requirements of prEN 10219 (2016) and it is CE marked according to EN 1090-2. Typical applications include load-bearing structures in the lifting, handling and transportation segments.

Strenx Tube 700MH is available in circular, square and rectangular shapes. Other shapes and sizes are available upon request.

The maximum length of the tubes is 12-18 meters, depending on the size. Longer or cut-to-length tubes are available upon request.

Hot dip galvanizing Strenx Tube 700MH hollow sections may lead to cracking. Please consult SSAB Tech Support prior galvanization.

Mechanical properties meet the requirements of prEN 10219 (2016).

The mechanical properties for rectangular hollow sections are tested by SSAB on the longer side of the cross section.

¹⁾ Impact testing according to EN ISO 148-1 is performed on thicknesses ≥ 6 mm. The specified minimum value corresponds to a full-size specimen.

²⁾ The hollow sections with $D/T < 15$ (round) or $(B + H)/2T < 12,5$ (rectangular and square), the minimum value of elongation is reduced by 2.

Fabrication and Other Recommendations

Welding, bending and machining

StrenxTube 700 MH has good weldability, including corner region, and it is suitable for thermal cutting. All the common welding methods are suitable with matching or undermatching consumables.

Tubes can also be sawed and machined with regular tools. Bending of the tubes is also possible, typically at least 5xD (five times the diameter) bending radius can be achieved with regular draw bending tooling.

Hot dip galvanizing Strenx Tube 700 MH hollow sections may lead to cracking. Please consult Tech Support prior galvanization.

For information concerning fabrication, see SSAB's brochures on www.ssab.com or consult Tech Support, techsupport@ssab.com.

Appropriate health and safety precautions must be taken when bending, welding, cutting, grinding or otherwise working on the product.
